- 模组为单 LED 电路，为避免电流超过最大额定值、保证亮度一致性、防止电网波动损害、提高 LED 可靠性和延长 LED 使用寿命，需要恒流驱动电源为模组提供稳定电流。

The module is a single LED circuit. In order to avoid the current exceeding the maximum rated value, ensure the brightness consistency, prevent the grid fluctuation damage, improve the LED reliability and extend the service life of the LED, the constant current drive power supply is required to provide a stable current for the module.

- led 的结温越高，光源越早出现光衰，寿命就越短。

The higher the junction temperature of the led, the earlier the light source appears, and the shorter the life span is.

- 如果操作条件超过我们的参数范围，led 属性可能与上表中的建议值不同。

If the operating condition exceeds our parameter range, the led property may be different from the recommended values in the table above.

- 所有测量均在 GOPRO LED 的标准化环境下进行，Ta =25°C。

All measurements were made under the standardized environment of GOPRO LED, Ta =25°C.
